DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1 thru 76 are rejected under 35 U.S.C. 102(e) as being anticipated by Sumiyoshi et al. '134A. Sumiyoshi discloses (see figures 1 and 2) an electro-optical device comprising a substrate 101, second substrate 201; a thin film transistor comprising a polysilicon (polycrystalline) semiconductor layer (source, drain, and channel regions); gate insulation film 105, insulation film 107, contacts (conductive film) 108, 109, insulation flattening film (organic resin film) 110, and display electrode (pixel electrode) 111.

It was inherent that the polysilicon semiconductor layer exhibits a peak of Raman spectra, displaced from a peak of single crystalline silicon to the lower frequency direction since less crystalline structures have a more disorganized structure and therefore a lower peak than single crystalline silicon. Also, see *Prior Art* paragraph below.

Prior Art

3. The prior art of made of record and not relied upon is considered pertinent to applicant's disclosure. See, for example, Iijima et al. '308 (see, for example, FIG. 7) where it shows how a

Raman peak of a less crystalline material keeps shifting towards a lower frequency direction, due to the material's more disorganized structure.

Product-by-Process Limitations

4. While not objectionable, the Office reminds Applicant that "product by process" limitations in claims drawn to structure are directed to the product, per se, no matter how actually made. *In re Hirao*, 190 USPQ 15 at 17 (footnote 3). See also, *In re Brown*, 173 USPQ 685; *In re Luck*, 177 USPQ 523; *In re Fessmann*, 180 USPQ 324; *In re Avery*, 186 USPQ 161; *In re Wethheim*, 191 USPQ 90 (209 USPQ 554 does not deal with this issue); *In re Marosi et al.*, 218 USPQ 289; and particularly *In re Thorpe*, 227 USPQ 964, all of which make it clear that it is the patentability of the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or *otherwise*. Note that applicant has the burden of proof in such cases, as the above case law makes clear. Thus, no patentable weight will be given to those process steps which do not add structural limitations to the final product.

The limitation "polycrystalline semiconductor layer is formed by crystallizing an amorphous semiconductor layer" does not add any structural limitations to the **final** product (a polycrystalline semiconductor layer), therefore, such claim language is given no patentable weight.
